Subject: Bad River DMRs

Hi Shane,

The existing permits for Diaperville and Birch Hill require semiannual reporting. What should be reported on the DMR is the value for the month that the actual sample was taken for influent. The max and ave should be the same value unless they take more than one sample in that 6 month window. The samples should be 6 months apart. For the other months 'N/A' should be put in those fields.

The new permits will require quarterly influent monitoring and the DMRs will be updated based on the new requirements. And probably will be on one page for each quarter.

John
